

ABSTRACT OF THE DISCLOSURE

A system for controlling wireless phone usage enables a supervisor to establish user profiles for supervised users of wireless phones across a range of parameters which are stored in a user profile database. Such parameters may include one or more locations at which use of the wireless phone is restricted or permitted. In addition, restrictions on phone use may be provided based upon total phone usage within a specified control period, time periods, dates or days of the week during which phone use is restricted or permitted. One or more lists including numbers that are always-accessible may be provided and one or more lists including numbers that are never-accessible may also be provided. In the event a call does not satisfy predefined criteria, the call is blocked. Predetermined messages may be played to the called or calling party as applicable when a call is blocked. Boolean combinations of restrictions and permissive use criteria for the wireless phone may be specified to provide for flexibility when establishing use criteria for the wireless phone.
